

antlr4::ParserRuleContext

antlr4::ParserRuleContext

parser::DQGrammarParser::BehaviorComponentContext

```
classDiagram
    class antlr4_ParserRuleContext["antlr4::ParserRuleContext"]
    class parser_DQGrammarParser_BehaviorComponentContext["parser::DQGrammarParser::BehaviorComponentContext"]
    antlr4_ParserRuleContext <|-- parser_DQGrammarParser_BehaviorComponentContext
```

The diagram illustrates a class hierarchy. At the top, there are two identical boxes labeled 'antlr4::ParserRuleContext'. Below them, centered, is a box labeled 'parser::DQGrammarParser::BehaviorComponentContext'. A horizontal line connects the two top boxes, and a vertical line descends from its center to the top box of the bottom box. From this point, two arrows branch out, each pointing to one of the 'antlr4::ParserRuleContext' boxes, indicating that 'parser::DQGrammarParser::BehaviorComponentContext' inherits from both.
